Master of Architecture and designing, after 4 years of experience I transitioned from Architect to UX Designer and was completely self-directed because I found many similarities Architects strive to design functional and aesthetically pleasing spaces in ways that make their users happy and encourage them to keep coming back. Sound familiar to UX? The way I see it – the only difference between architecture and UX design is the medium; - Architecture deals with physical environments and -UX deals with digital environments. I found out that my architectural background is an excellent asset, that provides me with plenty of transferable skills, plus the advantage of bringing a different perspective into the field of UX Designing.

Work experience

05/2018– 10/2018	UX/UI Designer, Internship Artistika Creative Digital Agency UI/UX
